

QA Checklist for Task 2 and Task 3

Task 2: Android - Add Error Message for Character Limit for Purpose Field

1. Character Counter Display

- Verify that the character counter is not displayed for inputs under 500 characters.
- Verify that the character counter appears when the user enters 500 characters.
- Verify that the counter updates correctly as the user types beyond 500 characters.

2. Character Limit Validation

- Verify that the field allows input up to 1000 characters.
- Verify that the field remains editable even after reaching 1000 characters.
- Verify that when exceeding 1000 characters, the field enters an error state (e.g., red border, warning icon).
- Verify that once the character count is reduced below 1000, the error state is removed.

3. CTA (Submit/Save) Button Behavior

- Verify that the CTA is disabled when the field exceeds 1000 characters.
- Verify that the CTA is enabled when the character count is within the allowed limit.
- Verify that the CTA becomes active again when the character count is reduced below 1000.

4. Suggestion Display

- Verify that text suggestions/autocomplete appear for inputs below 100 characters.
- Verify that text suggestions stop appearing once the user exceeds 100 characters.

5. Error Message Display

- Verify that a clear error message appears when the user exceeds 1000 characters.
- Verify that the error message disappears when the character count is corrected.

6. General Functional Checks

- Verify that the app does not crash when entering long texts.
- Verify the behavior across different screen sizes and orientations.
- Verify the correct styling of the error message (as per the design screenshots).

- Verify that the field supports copy-paste and handles pasted text correctly within the character limits.
- Verify that the changes persist when switching between different app screens.

Task 3: iOS - Strong Password Policy

1. Old Password Entry

- Verify that the old password field has a placeholder text indicating "Enter current password".
- Verify that the field is mandatory and does not allow the user to proceed without entering it.
- Verify that an error message appears if the old password is missing.

2. New Password Validation

- Verify that the new password field has a placeholder text indicating "Enter new password".
- Verify that the password must be at least 8 characters long.
- Verify that the password must contain at least one numerical character.
- Verify that the password must contain at least one letter.
- Verify that when fulfilling the password requirements:
 - "Minimum 8 characters" turns green when satisfied.
 - "At least one numerical character" turns green when satisfied.
 - "At least one letter" turns green when satisfied.
- Verify that an error message appears for passwords that do not meet the criteria.

3. Old and New Password Validation

- Verify that the new password cannot be the same as the old password.
- Verify that an error message is displayed if the user tries to set the same password.

4. CTA (Save Button) Behavior

- Verify that the Save button is disabled until:
 - The old password is entered.
 - The new password meets all validation criteria.
- Verify that the Save button becomes active only when both fields are correctly filled.

5. Validation on Submit

- Verify that validation is triggered only after clicking the Save button.
- Verify that if the old password is incorrect, an error message is displayed.

- Verify that if the new password does not meet criteria, a specific error message is displayed.

6. Success Flow

- Verify that when the correct old password and a valid new password are entered:
 - A success message banner is displayed: "Your Password was updated".
 - The user is navigated to the Settings page.

7. General Functional Checks

- Verify that password fields support copy-paste functionality.
- Verify that the validation works across different iOS versions and devices.
- Verify that the password input is masked (hidden by default).
- Verify that a Show/Hide Password toggle works correctly.
- Verify the error messages and UI elements follow the provided design.
- Verify that the system does not allow commonly used weak passwords if applicable.
